GUARDIAN CONTROL PANEL Featuring 24 volt Operator Controls

WASTEQUIP - GUARDIAN CONTROL PANEL

Automatic compaction control is very simple

NEMA 4 rated, UL listed control panel

Control panel

Electrical control panel operates the compactor. It contains the switches, timers, relays, and program controls. This unit is a component of a remote power unit on our larger machines or is integrally mounted on smaller machines. Control panel is NEMA 4 rated, UL listed and rated for 24 volts.

Customer assistance

Wastequip will assist you with compactor area designs, engineering requirement and offer conceptual studies and site surveys. We offer customization to work around more difficult applications. Rental, lease and purchasing plans are available. We also offer service and training seminars so your people can operate and maintain this equipment.

**A
Wastequip
Standard**

System Control is secured with a key and Initiates; ram extension, retraction and automatic shut down

Key operated tamper resistant start/stop system control

The System Control operates the compactor. The key is locked in the "Off" position when removed, to prevent un-authorized use of the system. A simple turn of the key initiates the compaction process which extends the ram, retracts the ram and stops automatically. The red light in the stop button will be steady on for container full, and flash rapidly for an error condition when operating the system. An optional slow flashing light will indicate that the container is 3/4 full. This control will also allow the ram be to be retracted or extended from any position. The Wastequip's control system has a "pack out" mode which boosts hydraulic pressure to completely fill the container. The compactor will shut down the automatic cycle when container is 100% full.
